I ran a backtest on whether the profit-taking layer helps the new version. Quick note on the gate first: I'm using NO Take-Profit if SGPCR>3.2 OR M3 Long (stricter — blocks PT more often). Your version uses AND, which lets PT fire more often. The test below used Excel's Q column with my OR gate, so it's the lower bound needle.

The rule tested: When Excel's Q (long) or AH (short) signals PT, reduce the X-System position by 25 percentage points toward Flat:

100% Long → 75% Long; 75% → 50%; 50% → 25%; 25% → Flat
50% Short → 25% Short

Result (2013-01-02 → 2026-05-29, 13.4 yrs): (edited)

	Raw v3.1	+ PT layer (AND gate)	Delta
Equity multiple	1,569×	1,443×	−126×
CAGR	73.31%	72.23%	−1.08 pp
Sharpe	4.72	4.73	+0.01
Max DD	−4.80%	−4.80%	0.00 pp
% months positive	95.7%	95.7%	0

PT fired on 127 days total — 94 long, 33 short — about 3.8% of all days.
Verdict: turn PT off. Costs ~1 pp CAGR over 13 years and doesn't reduce max DD at all. The reason it can't help DD: PT only triggers when cum profit > 3% (a winner condition). The trades that cause the worst drawdowns are losers where cum profit never hit 3%, so PT never fires on them. PT cuts winners, not losers.

In new version the bounce overrides, the 50%-Short cap, and the 3× ATR emergency stop already do the risk management at the signal level. PT was useful in v3.0 to smooth the X-Signal sub-strategy which had no overrides. In v3.1 it's redundant friction — and with my OR gate it's already mostly gated off anyway.

jimmylee9135/31/26, 2:56 PM

Yes, makes sense. The way the new system layers into and out of trades naturally provides a better verion of profit taking in many cases.

"OK, the Buy3 issue is just a simple labeling issue on the dashboard... it is fixed now and correctly showing a Buy2 trade". Could you please point out an easy way to fix it?

jimmylee9137:40 AM

Change cell Dashboard!H9 to this:

```
=IF(INDEX(Signals!A10:JG5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!JC8, Signals!$A$8:$JG$8, 0))="Long", "Buy2", IF(INDEX(Signals!A10:JG5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!JC8, Signals!$A$8:$JG$8, 0))="Pause", "Buy2 Pause", IF(INDEX(Signals!A10:JG5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!JE8, Signals!$A$8:$JG$8, 0))="Long", "Buy3", IF(INDEX(Signals!A10:JG5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!JE8, Signals!$A$8:$JG$8, 0))="Pause", "Buy3 Pause", IF(INDEX(Signals!A10:JG5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!DZ8, Signals!$A$8:$JG$8, 0))="Long", "Buy1", IF(INDEX(Signals!A10:JG5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!DZ8, Signals!$A$8:$JG$8, 0))="Pause", "Buy1 Pause", IF(INDEX(Signals!A10:WA5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!NJ7, Signals!$A$7:$WA$7, 0))="Short", "Short", IF(INDEX(Signals!A10:WA5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!NN8, Signals!$A$8:$WA$8, 0))="Bounce", "Bounce", IF(INDEX(Signals!A10:WA5000,MATCH($C$3, Signals!A10:A5000, 0), MATCH(Signals!NN8, Signals!$A$8:$WA$8, 0))="Headfake", "HeadFake", "Flat"))))))))
```

and cell Dashboard!M9 to this:

```
=IF(INDEX(Signals!A10:JG5000,MATCH($E$3,Signals!A10:A5000,0),MATCH(Signals!JC8,Signals!$A$8:$JG$8,0))="Long","Buy2",IF(INDEX(Signals!A10:JG5000,MATCH($E$3,Signals!A10:A5000,0),MATCH(Signals!JC8,Signals!$A$8:$JG$8,0))="Pause","Buy2 Pause",IF(M5="","",IF(INDEX(Signals!A10:JG5000,MATCH($E$3,Signals!A10:A5000,0),MATCH(Signals!JE8,Signals!$A$8:$JG$8,0))="Long","Buy3",IF(INDEX(Signals!A10:JG5000,MATCH($E$3,Signals!A10:A5000,0),MATCH(Signals!JE8,Signals!$A$8:$JG$8,0))="Pause","Buy3 Pause",IF(INDEX(Signals!A10:JG5000,MATCH($E$3,Signals!A10:A5000,0),MATCH(Signals!DZ8,Signals!$A$8:$JG$8,0))="Long","Buy1",IF(INDEX(Signals!A10:JG5000,MATCH($E$3,Signals!A10:A5000,0),MATCH(Signals!DZ8,Signals!$A$8:$JG$8,0))="Pause","Buy1 Pause",IF(INDEX(Signals!A10:WA5000,MATCH($E$3,Signals!A10:A5000,0),MATCH(Signals!NJ7,Signals!$A$7:$WA$7,0))="Short","Short",IF(INDEX(Signals!A10:WA5000,MATCH($E$3, Signals!A10:A5000, 0), MATCH(Signals!NN8, Signals!$A$8:$WA$8, 0))="Bounce", "Bounce",IF(INDEX(Signals!A10:WA5000,MATCH($E$3, MATCH(Signals!NN8, Signals!$A$8:$WA$8, 0))="Headfake", "Headfake", "Flat"))))))))
```

You'll need to unprotect the sheet temporarily to make those changes

Dr0077:44 AM

Thank you so much. Let me try it out.

"our VIX/VVIX Pause rules are going to be changing slightly. I sent Jimmy the rules a bit ago. It cuts those types of Pause signals in half." I am leaving tomorrow to China. If you can send me the updated spreadsheet before tomorrow, that would be great. If not, I can still take it in China since I book the unlimited data plan.

jimmylee9137:47 AM

OK, let me see if I can get it plugged in today

Dr0077:47 AM

Thanks again. No hurry.

Dr007
